

WEB Technologies 1 (Front End). Midterm Project

Choose any topic you like and build a small website for it (a brand, a café, an event, a club, a service, a portfolio, a game, anything). You can work individually or in a group of up to 4 students. **The team and the topic stay the same for the Endterm and the Final project, so choose them carefully.** This project gives you more freedom than the assignments, and it is graded differently: just a working website is not enough. Most points for the website are given for the originality of the idea, the style and the solutions you find. **A correct but simple website gets a satisfactory grade, not an excellent one.**

Rules for Submission:

1. The project can be done individually or in a team of up to 4 students. Every student gets an **individual grade**. **If the works of different teams are the same, the grade is 0.**
2. Submit before the deadline. **Late works are not accepted!** To get a grade every member must **submit before the deadline AND defend the project**. **A student who does not defend receives 0, even if the team submitted.**
3. You must submit: the same report per team in **Midterm_FullName1_FullName2....docx** (or .pdf) format. **If you submit in other formats, your grade will be 0.**
4. All source code must be uploaded to one GitHub repository and published (e.g., GitHub Pages). **Any code you use must be clearly explained at the defense; otherwise it is not counted as your work. If a student cannot explain their own code, that student gets 0.**
5. **No downloaded templates or themes.** Icons, fonts, photos, and AI-generated images or texts for the content of the website are allowed, with credit.
6. **IN THE REPORT MUST BE:**
 - All team members and the contribution of each
 - The topic of the website and why you chose it
 - The style of the website: colors, fonts and main elements, and why you chose them
 - Screenshots of every page at different screen sizes (375px, 768px and 1280px)
 - A short conclusion: what you built and learned
 - **The GitHub repository URL and the deployed website link** (e.g., GitHub Pages). **Submissions without both links will receive a grade of 0.**

Requirements

- **Size:** at least 2 pages for 1 student; 4 pages for 2; 5 pages for 3 and 6 pages for 4. Every member builds at least 1 page completely.
- **Use:** everything learned in Assignments 1–3: semantic HTML, at least 1 form and 1 table where they make sense, Flexbox, Grid, your own media queries and Bootstrap. You can add anything else from HTML and CSS that fits your idea (animations, transitions, custom fonts, icons, illustrations). **A page you built for Assignment 3 can be used as your page in the project, updated to the style of the website.**
- **Should work:** one navigation on every page; the same style on all pages; every page looks finished at 375px, 768px and 1280px without horizontal scroll; the website opens on GitHub Pages.

Assessment criteria

The first four criteria are the same for the whole team; the defense is individual.

Criterion	What is checked	Points
Idea and style	22–25: an original idea for a clear visitor; its own recognizable style that fits the idea; the same colors, fonts and spacing on every page; at least 1 memorable solution (an unusual layout, an illustration, an interesting hero, animations or hover details); every page looks finished at all screen sizes 16–21: a clear idea and its own consistent style, but without a memorable solution, or some pages look weaker than others 10–15: its own palette and fonts, neat and consistent, but safe and similar to many other websites 5–9: a generic topic without its own idea; looks like a template, or the pages look different from each other 0–4: default Bootstrap look, browser fonts, placeholder text (“lorem ipsum”, “Card title”) or one layout repeated on every page	25
Teamwork	- the website works as one: the same style, navigation and components on all pages - one shared repository where every member commits their own pages; every member styles the Bootstrap elements on their own pages - the work is divided equally: every member builds a comparable part of the website	5
Technical quality and course topics	- the topics of Assignments 1–3 are used where they fit the idea: semantic HTML, at least 1 form and 1 table, Flexbox or Grid, your own media queries, the Bootstrap grid and components - the requirements are met: size, navigation, responsive at 375px, 768px and 1280px, GitHub Pages works	5
Report	- contains everything listed in the rules; screenshots can actually be read; designed in the style of the website	5
Defense (individual)	- presents their own pages and explains the design decisions: why these colors, fonts and layout (10) - answers questions about their own code, the topic and how a teammate’s part works (25) - makes a small change to their own page based on their existing code, without assistance or hints (25)	60
Total		100
